Note: State totals may not sum to national total due to rounding. Wage increase, GDP impact, and Jobs impact totals are the sums of all three steps. GDP and job stimulus figures utilize a national model to estimate the GDP impact of workers' increased earnings. Thus the total state stimulus may be lower than this amount because workers in each state will not necessarily spend all of their increased earnings in-state. However, we can assume that most of the increased earnings will be spent in-state, and thus most of the jobs created will be in-state.
